

ALTTRED NEXXUS × GUHANTARA

The account, opened up

A full audit of the brand, the website, the Meta account and the Google account — and what ₹45.65 lakh actually bought.

1 January 2025 – 29 September 2026

Prepared 29 September 2026

What we looked at

The accounts

21 months of Meta, broken out by month, age, gender, platform and placement. 19 months of Google, by month and by campaign type. Same window for both.

The property

The website, the booking engine, live room rates, 21,392 Google reviews, 317 TripAdvisor reviews and the twenty competing resorts on Kanakapura Road.

The category

Hospitality social benchmarks for 2025–26, Indian travel discovery research, and how the properties that command a premium are positioned.

What we could not see

Any CRM, because there is none. Any booking data, because none is captured. Which is the finding, not a gap in the audit.

THE FINDING

Guhantara has the demand of a category leader, the positioning of a commodity, and no way to tell which of its rupees worked.

Three problems, one root. Everything that follows is evidence for that sentence and a plan to change it.

What follows

01

The business problem

Demand without a brand, and a budget nobody can trace.

04

Tracking and CRM

Two pixels, one broken chain, and the system that is missing.

07

The weekday problem

Five buyers who are free on a Tuesday.

02

The Meta account

₹14.94L, 1,259 leads, and half the spend running blind.

05

Website and landing pages

Where every rupee lands, and why a third of it never arrives.

08

Supperclub

10,000+ sign-ups, and what transfers to a resort.

03

The Google account

₹30.72L, and a conversion number that is not real.

06

Creative and brand

What is running, what is working, and what Guhantara should stand for.

09

The plan

Ninety days, what we measure, and what we need.

Twenty-one months of spend, and one unanswerable question

Total media spend

₹45.65L

Meta ₹14.94L + Google ₹30.72L

Meta leads recorded

1,259

Blended cost per lead ₹1,186.29

Bookings attributed

Zero

Not none sold — none traceable

The third number is the one that matters. Rooms were booked and day-outs were sold across these 21 months. Nothing in either account can tell you which advert produced a single one of them.

The awareness is already won. The reputation is being lost.

Source	Rating	Reviews
Thrillophilia	4.2 / 5	18,670
Google	3.7 / 5	21,392
TripAdvisor	3.2 / 5	317

Against 726 ratings for Wild Valley and 754 for Elim, Guhantara has roughly 25 times the reviewed footfall of its nearest neighbours on the same road.

Of 21,392 Google reviewers

3,289

rated it two stars or less. That is 15% of everyone who walked through the door and wrote about it.

TripAdvisor ranks it #587 of 1,258 Bengaluru hotels. Value 3.1. Service 3.1.

The loop the business is stuck in

01

Discount to fill

Weekday 25% and weekend 15% off, with struck-through prices in the booking engine itself.

02

Volume arrives

Peak days fill past the point where the experience holds together.

03

The rating drops

Overcrowding and hygiene complaints put 15% of reviewers at two stars or below.

04

Persuasion costs more

A shopper who reads 3.7 stars needs more convincing, so every booking costs more to buy.

And a costlier booking argues for a deeper discount. The rating is not just an operations problem — it is a line item in the media budget.

Current offers per the client: weekdays 25% off, weekends 15% off.

Twenty resorts on one road, selling one product

Resort	Day-out price	Ratings	What it claims
Guhantara	₹1,499 from ₹1,999	18,670	Underground, 10 m below ground
Wild Valley	₹1,349 from ₹1,499	726	Zip-lining, rappelling, trekking
Elim Resort	₹1,319 from ₹1,600	754	50 rooms, kids' play area
Discovery Village	Not listed	—	Adventure and relaxation
Urban Valley	Not listed	—	Ultra-modern amenities
Khedda	Not listed	—	Waterfall, outdoor pool

Thirteen more use the same vocabulary: outdoor pool, kids' play area, indoor games, open-air restaurant, natural surroundings. Guhantara is priced **inside** that pool, at a 10–13% premium for an asset that is not comparable at all.

It owns something unrepeatable and prices it like a substitute

Each property placed by how it is sold, not by what it owns.

The copy test: could a rival have it by next season?

What Guhantara sells today	Copyable?
Buffet, pool, rain dance, games	Yes — all twenty already have it
Zip-line, quad bike, zorbing, archery	Yes — bought equipment
Ayurvedic spa	Yes — common on the road
Ten metres underground	No
Tunnel trekking	No
Rangamandapa, a 700-seat underground amphitheatre	No
Being India's first cave resort	No — it is a fact of history

The four shaded rows are the brand. They are also close to absent from the advertising, which leads with price and activity count.

Named spaces: Sambhojana, Madhushala, Rangamandapa, Samvaad, Agastya Kuteera — none used in marketing.

SECTION TWO

The Meta account

Spent

₹14.94L

33% of total media

Impressions

122.6M

Reach 33.3M accounts

Leads recorded

1,259

Forms and WhatsApp only

Cost per lead

₹1,186

Blended across 21 months

Those are the headline numbers. The next twelve slides are about what sits underneath them, and almost none of it is good news.

HALF THE BUDGET

₹7,41,739

ran across ten months in which **not one lead was recorded**. That is 49.7% of every rupee Meta has spent on Guhantara.

In the eleven months where leads were tracked, the same account delivered 1,259 leads at ₹597 each. The tracking, not the media, is what changed.

Months with zero leads recorded: Jan, Feb, Mar, Apr, Aug, Oct, Nov 2025 and Apr, May, Jun 2026.

Monthly Meta spend — shaded where no lead was recorded

Source: Meta Ads Manager monthly export. Bars are spend; colour is whether any lead was recorded.

Cost per lead swings by a factor of 393

Month	Spend	Leads	Cost per lead
May 2025	₹79,611	285	₹279
Jul 2025	₹92,713	1	₹92,713
Sep 2025	₹1,14,830	51	₹2,252
Dec 2025	₹33,379	130	₹257
Jan 2026	₹57,163	242	₹236
Jul 2026	₹74,037	29	₹2,553
Sep 2026	₹34,883	50	₹698

A resort's audience does not become 393 times harder to reach in two months. This is a measurement artefact, not a market shift, and it makes every optimisation decision taken on this data unsafe.

Selected months. Best recorded month ₹236, worst ₹92,713.

Two thirds of the clicks you pay for never arrive

Outbound clicks that became a landing page view

33.72%

Across the full 21 months and ₹14.94L of spend.

Bare minimum

60–70%. Below this, the page or the pixel is the problem, not the audience.

Healthy

Above 80%. The click, the page and the measurement are all doing their job.

Where Guhantara sits

33.72%. Two out of every three paid clicks are either bouncing before the page loads or not being recorded at all.

On ₹14.94L of spend, closing the gap to 70% is worth more than any creative change in this deck.

OBC>LPV = outbound clicks to landing page views. Source: Meta Ads Manager.

OCTOBER 2025

133.33%

of outbound clicks became landing page views. More people arrived at the page than left the advert to get there.

That is arithmetically impossible, and it is the cleanest single proof that the measurement is broken. In the same 21 months the figure ranges from **0.01%** in January 2025 to this. Neither end is a real audience behaviour.

Source: Meta Ads Manager monthly export, OBC>LPV column.

Women cost half as much, and get a quarter of the budget

Men

₹1,458

per lead · ₹10,86,080 spent, 72.7% of budget · 745 leads, 59.2% of leads

Women

₹789

per lead · ₹4,04,808 spent, 27.1% of budget · 513 leads, 40.7% of leads

The opportunity

+631

leads. If the male budget had converted at the female cost per lead, it would have returned 1,376 instead of 745.

Women are 1.85 times more efficient in this account and have been for 21 months. Nothing in the targeting reflects that. This is the fastest efficiency gain available, and it needs no new creative.

Source: Meta Ads Manager, gender breakdown. The +631 figure is arithmetic on existing cost per lead, not a forecast.

Where the money goes, and where the leads come from

Age	Spend	Share	Leads	Cost per lead
35–44	₹4,20,881	28.2%	440	₹957 — best
25–34	₹6,32,199	42.3%	561	₹1,127
45–54	₹1,46,045	9.8%	126	₹1,159
18–24	₹2,28,355	15.3%	123	₹1,857
55–64	₹41,432	2.8%	8	₹5,179
65+	₹24,589	1.6%	1	₹24,589

55 and over took 4.4% of the budget and produced 0.7% of the leads. ₹66,021 for nine leads. **18–24** took 15.3% of the budget at the second-worst cost per lead. They browse, they do not book. **25–44** is the business: 70.5% of spend, 79.5% of leads. Corporate video performs hardest here.

Source: Meta Ads Manager, age breakdown, 1 Jan 2025 – 29 Sep 2026.

Instagram does the work. Facebook takes the budget.

Instagram

₹929

per lead · 61.8% of spend · **78.9%**
of leads · 993 leads from ₹9,22,738

Facebook

₹2,064

per lead · 36.8% of spend · **21.1%**
of leads · 266 leads from ₹5,48,958

The gap

2.2×

Facebook costs 2.2 times more per lead. The same budget at Instagram's rate would have returned **591 leads, not 266.**

Facebook is not worthless — it reaches an older, family-planning audience the corporate and wedding products need. But it is funded as though it performs like Instagram, and it does not.

Money spent where nothing has ever converted

Across four placements and platforms

₹67,188

and not one recorded lead in 21 months.

Where	Spend	Leads
Audience Network	₹20,315	0
Feed: video feeds	₹17,700	0
Native, banner, interstitial	₹15,474	0
Explore home	₹6,397	0
In-stream reels	₹5,774	0
Threads	₹1,207	0
WhatsApp and Messenger placements	₹322	0

Audience Network and Threads rarely produce a result for any brand we run, so the honest move is to exclude them outright and cap anything similar to a token share of budget. Here they sit inside ₹67,188 — roughly 4.5% of Meta spend — left on because placements default to automatic and nobody has looked.

Source: Meta Ads Manager, platform and placement breakdowns.

The biggest placement is the worst one

Placement	Spend	Share	Leads	Cost per lead
Feed	₹5,48,073	36.7%	393	₹1,395 — worst
Instagram Reels	₹4,28,107	28.7%	404	₹1,060
Instagram Stories	₹2,94,803	19.7%	268	₹1,100
Facebook Reels	₹1,48,209	9.9%	152	₹975
Facebook Stories	₹15,787	1.1%	37	₹427 — best

Feed absorbs more than a third of the budget and returns the most expensive leads of the four major placements. Moving that budget to Instagram Reels at its own historical rate implies roughly **124 more leads for the same money**.

Source: Meta Ads Manager, placement breakdown. Top five of 26 placements shown; these carry 99.6% of recorded leads.

FACEBOOK STORIES

₹427 a lead

The cheapest lead in the entire account, on **1.1% of the budget**.

Thirty-seven leads from ₹15,787. It is a small sample and it may not hold at scale — which is exactly why it should have been tested properly a year ago. Instead it has been left as a rounding error while Feed spent thirty-five times as much at three times the cost.

Source: Meta Ads Manager, placement breakdown. 37 leads is a small base; treat as a test signal, not a proven rate.

One account, four different jobs, no consistent strategy

Cheapest month, cost per 1,000 impressions

₹3.03

November 2025

Dearest month, cost per 1,000 impressions

₹125.62

March 2026

Spread

41×

Within one account, one property

A 41-fold swing in media cost is not the auction moving. It is the account switching between reach buying and conversion buying without a plan, so Meta's learning resets every time. Add three resorts sharing one ad account and the algorithm never accumulates a clean signal for any of them.

Recommendation: Guhantara needs its own ad account, separated from the other two resorts, before any structural optimisation is worth doing.

Source: Meta Ads Manager monthly export, spend divided by impressions.

Meta: what we would change

When	Change	Why, from this audit
Week 1	Separate ad account for Guhantara	Three resorts in one account, 41× cost-per-impression swing
Week 1	Turn off Audience Network and the five zero-lead placements	₹67,188 with no recorded lead in 21 months
Week 1	Ideal range is 25-35 where the most leads come from. 18-24 and 35-45 can be kept as suggestions and separate targets.	₹66,021 for nine leads; 18–24 at ₹1,857
Week 2	Have dedicated budgets and targetings for women and men	₹789 against ₹1,458; ₹929 against ₹2,064
Week 2	Move Feed budget into Instagram Reels and Stories; fund a Facebook Stories test	Feed at ₹1,395 is the worst major placement; Stories at ₹427 is untested
Week 3	Rebuild the campaign structure by product: day-out, stay, corporate, events	Two products, one landing page, no separation in the account
Ongoing	Creative refresh cycle with a fixed testing budget	Creatives from July still running unrotated

None of this is worth doing until the measurement is fixed. That is the next two sections.

Sequencing matters more than any single change on this list.

SECTION THREE

The Google account

Spent

₹30.72L

67% of total media

Clicks

2,61,629

Search and Demand Gen

Conversions reported

51,289

From a resort with 18 rooms

Cost per conversion

₹59.89

A day-out ticket sells for
₹1,499

Google is twice the Meta budget and gets a fraction of the scrutiny. It is also where the numbers stop being believable.

Source: Google Ads, 1 Jan 2025 – 29 Sep 2026. First recorded month is March 2025.

THE CORE PROBLEM

The 51,289 conversions in this account are not bookings.

Whatever they are — page views, phone-number clicks, scroll depth, an engagement event — they are being counted as the outcome, and every bid Google has made for 19 months has been optimised toward them.

The next four slides are the proof. Each one on its own would be a red flag. Together they mean the conversion column cannot be used to make a single decision.

We could not inspect the conversion actions directly — that needs account access.

Who is already being asked for by name

Brand	Head search term	Avg. monthly searches, India
Guhantara	guhantara · guhantara resort · guhantara cave resort	90,500
Discovery Village	discovery village · discovery village resort	8,100
Aldovia	aldovia · aldovia resort	720
CGH Earth	cgh earth · cgh earth hotels	8,100
Wild Valley	wild valley resort	14,800
Clarks Exotica	clarks exotica · clarks exotica resort	5,400

Brand search volume is the cleanest read on who the market already wants. It also decides the Google split: how much belongs on your own name, and how much has to go and find demand that has never heard of you.

Volumes to be pulled from Google Keyword Planner, India, last 12 months. Fill before presenting.

Proof one: 0.9% of the spend claims 67% of the conversions

Campaign type	Cost	Conversions	Conv. rate	Cost / conv.
Search	₹30,43,823	16,699	7.66%	₹182.28
Demand Gen	₹27,614	34,590	76.03%	₹0.80

Demand Gen share of spend

0.9%

Its share of reported conversions

67.4%

Cost-per-conversion gap vs Search

228×

A 76% conversion rate on a discovery campaign, at eighty paise a conversion, describes an event that fires on almost every visit. It does not describe somebody booking a room.

Source: Google Ads, campaign type report, 1 Jan 2025 – 29 Sep 2026.

Proof two: one month holds two thirds of 19 months of conversions

Month	Clicks	Cost	Conversions	Conv. rate
January 2026	17,086	₹2,15,713	1,336	7.82%
February 2026	9,758	₹1,65,550	1,849	18.95%
March 2026	51,657	₹1,65,437	34,488	64.53%
April 2026	118	₹831	142	102.90%
May 2026	7,003	₹30,282	237	3.38%

March 2026 reports **34,488 conversions** — 67.2% of everything the account has ever recorded — at **₹4.80** each.

Clicks jumped five-fold in the same month while cost fell. That is Demand Gen scaling, not demand for a cave resort tripling overnight.

Remove March and the account's whole conversion history changes shape. Any year-on-year report built on this is wrong.

Source: Google Ads, monthly report.

PROOF THREE · APRIL 2026

102.90%

conversion rate. **142 conversions from 118 clicks.**

More people converted than clicked. Like October's 133% on Meta, this is not a performance result — it is a measurement system reporting an event that does not require the click it is being credited to.

Both platforms are independently producing impossible numbers in the same period. That is not a coincidence — it points at the website and the pixel setup they share, which is the next section.

Source: Google Ads, monthly report. April 2026 also shows near-zero spend on both platforms.

Proof four: the revenue column is not revenue

Month	Conversions	Conversion value	What it implies
July 2025	4,075.19	₹4,075.20	₹1 per conversion
December 2025	1,421.18	₹1,421.18	₹1 per conversion
March 2026	34,488.44	₹34,488.44	₹1 per conversion
May 2026	236.67	₹5,57,763.84	₹2,357 each
June 2026	144.75	₹1,77,117.65	₹1,223 each
August 2026	289.75	₹289.75	Back to ₹1 each

For most of the account's life the conversion value is simply a copy of the conversion count — no rupee value assigned at all. For three months in 2026 someone assigned real values that look like room rates, then it reverted. The ₹8.37L of reported conversion value across the period is not comparable with itself, let alone with spend.

Source: Google Ads, monthly report, conversion value column.

Under the noise, Google is getting more expensive every month

Month	Clicks	Avg. CPC	Cost / conv.	Top-of-page share
February 2026	9,758	₹16.97	₹89.54	34.36% absolute top
June 2026	5,232	₹5.81	₹210.02	31.32%
July 2026	7,872	₹21.35	₹410.35	50.22%
August 2026	4,597	₹28.44	₹451.26	66.56%
September 2026	3,777	₹22.21	₹512.35	64.04%

Cost per conversion has risen **5.7×** since February, on a conversion definition that is already too generous.

Clicks are falling while the absolute-top share climbs to 64–66%. The account is paying more to win a shrinking pool of searches.

Click-through rate in those months is **19–22%**, far above a normal non-brand search campaign.

A HYPOTHESIS, NOT A FINDING

Is Google buying traffic Guhantara already owns?

The signals

Click-through rate of 19–22%, absolute top-of-page share above 64%, and volume in the low thousands. Generic resort searches do not behave like this.

What it means

Spend concentrated on the brand's own name. People searching "Guhantara" were coming anyway; the click is bought, not created.

Why it matters here

With 21,392 Google reviews, Guhantara has enormous organic brand demand. Paying to intercept it inflates the conversion count and hides how little new demand is being created.

To confirm: The Majority spends across jan01-2025 to sep29 2026 till date have been made across only two campaigns in Google that are two search campaigns and both have used brand keywords as the primary search keywords

Stated as a hypothesis because the campaign-level export does not contain search terms.

Google: what we would change

When	Change	Why, from this audit
Week 1	Audit every conversion action; retire the ones that are not a booking or an enquiry	51,289 conversions, ₹59.89 each, one month holding 67% of them
Week 1	Separate Demand Gen from Search in all reporting	0.9% of spend claiming 67.4% of conversions at ₹0.80
Week 1	Pull the search terms report, split brand from non-brand	19–22% CTR and 64% absolute top share suggest brand-heavy spend
Week 1	Build and launch a landing page made for paid traffic	One URL serves day-out and rooms alike, so no page matches the search intent
Week 2	Assign real rupee values to each conversion type	Conversion value is a copy of the count in most months
Week 2	Define primary against secondary conversions so bidding optimises to bookings	Everything currently counts equally, so Google optimises to the cheapest event
Week 3	Rebuild campaigns by product and by intent, with matched landing pages	One URL serves day-out and rooms alike
Week 4	Re-baseline. Report cost per qualified enquiry, not cost per conversion	Nothing before the fix is comparable with anything after it

Expect the reported conversion count to **fall sharply** once this is done. That is the fix working, not performance dropping, and the client should be told before it happens.

Sequencing assumes account access in week one.

SECTION FOUR

Both accounts are broken in the same place, and it is not in the accounts.

Data attribution not being proper

One URL serving two different products

A redirect to a booking domain the pixel cannot follow

No CRM to catch anything that survives

Four faults, one consequence: the moment a person leaves the advert, Guhantara loses sight of them. Everything in the last two sections is a symptom of this slide.

Two Meta pixels are live on one website

Active Meta pixels on guhantara.com

2

Nobody on the client side can currently say why, which of them the ad account optimises against, or what each is set to record.

Events double-count

One page view can register twice, inflating landing page views and conversions.

Optimisation splits

Signal is divided across two datasets, so neither learns quickly and neither is complete.

Reporting cannot be trusted

This is a credible cause of the impossible 133% and 102.9% figures in both accounts.

Identified on the live site. Which pixel is canonical needs to be decided with the client.

The chain breaks at the exact moment money changes hands

01

The ad

Meta or Google,
tagged

02

guhantara.com

Pixels fire — both of
them

03

Book Now

The visitor clicks
through

04

Redirect

secure-booking-
engine.com — a
different domain

05

The booking

Invisible. No pixel, no
event, no attribution.

The pixel does not follow the visitor across the domain boundary, so **every completed booking is unattributed**.

Meta and Google are therefore optimising toward step 2 or 3 — a page view or a click — because that is the last thing they can see.

This single gap explains the ₹0.80 conversions, the impossible rates, and why nobody can name a cost per booking.

The fix: keep the booking inside the website

TODAY — REDIRECT

The visitor leaves guhantara.com

- Pixel does not follow
- No purchase or lead event fires
- Session and campaign tags are lost
- Booking value never reaches the ad platform
- The visitor sees a different-looking site mid-purchase

PROPOSED — EMBEDDED WIDGET

Djubo runs inside the page

- Pixel and tags stay with the visitor
- Purchase event fires on confirmation
- Booking value passes back to Meta and Google
- Bidding can optimise to revenue, not page views
- The brand experience holds all the way through

First action: confirm with Djubo whether their widget can be embedded on guhantara.com for this property and plan. Their product is described as an attachable widget, so this should be available — but it must be verified before we commit to it. If it cannot be embedded, the fallback is cross-domain tracking plus a server-side purchase event from the booking confirmation.

Either route restores the purchase event. The embed is cleaner; the fallback works if the embed is unavailable.

What it looks like when it works

01

The ad

Tagged by campaign and product

02

The landing page

One page per product, one pixel

03

The CRM

Person and source logged, owner assigned

04

Follow-up

Call, quote, chase — all recorded

08

The report

Cost per booking, weekday against weekend

07

The platform learns

Finds more people who book, not who click

06

Sent back

Conversions API returns the booking and its value

05

The booking

Confirmed inside the site, not off it

Steps 3, 5 and 6 do not exist today. Build those three and every number in this deck becomes decision-grade. Meta's Conversions API for Business Messaging does step 6 for click-to-WhatsApp ads, which is how most enquiries already arrive.

The loop runs left to right on the top row, then right to left on the bottom, back to the ad.

There is no CRM. Here is what that costs.

No attribution

Enquiries arrive by phone and WhatsApp — the only contact routes on the site — and nothing ties them to the campaign that caused them. Budgets get judged on clicks.

No lead quality

1,259 Meta leads exist as a number and nothing else. Which were serious, which booked, which were wrong numbers — unknowable.

No repeat business

A corporate buyer who ran a good offsite last year is the cheapest lead the resort will ever have. Today nobody holds their name in a system that prompts a call.

No audiences

Retargeting, exclusions, lookalikes and weekday offers all need a list of who enquired and who booked. That list currently lives in people's phones.

And underneath all four: **18,670 ratings on one booking aggregator** is a dependency, not just a credential. The platform owns the customer, sets the price comparison and takes the margin. A CRM is how Guhantara starts owning its own demand.

The client confirmed no CRM is in place.

What you would finally be able to see

Leads — every enquiry from every source, in one place

today: a number with no detail

MQL — right city, right party size, real contact details

today: invisible

SQL — reached, dates discussed, quote sent

today: invisible

Booked — room, day-out or
offsite

today: invisible

With this you can price each stage:
**cost per MQL, cost per SQL, cost
per booking** — by channel, by
campaign, by creative.

You can also send the **booked** stage
back to Meta and Google, so they
stop optimising toward the cheapest
click.

Guhantara's own baseline sets the
quality target. **We would measure for
one month before promising a
percentage**, rather than quoting an
industry figure that may not fit a resort.

Widths are illustrative of funnel shape, not measured values — no stage data exists yet.

The options worth considering now

Option	From	WhatsApp	Fit for Guhantara
Zoho CRM	₹800	Yes, via WhatsApp Business	Best all-round start. Handles corporate and event pipelines, guest profiles and follow-up automation, and connects to booking systems. Needs configuration to behave like hospitality software.
TeleCRM	₹799	Native, WhatsApp Cloud API	Built around calling and WhatsApp, which is exactly how enquiries already arrive here. Fastest route to a working system for a small team.
Freshsales	₹749	Not confirmed	Simple and quick to launch. Reasonable if the team stays small and WhatsApp is handled elsewhere.
HubSpot	Free tier, paid from \$7	Not native	Strong free entry and good email tooling. Weaker on the calling and WhatsApp habits this business runs on.
LeadSquared	₹2,500	Not confirmed	Built for high-volume sales in education and finance. More than this stage of the business needs.

Prices are per user per month on annual billing, from a published Indian CRM comparison. Confirm current pricing with each vendor before committing — these move.

Source: TeleCRM, Top 10 CRM software in India, read 29 Sep 2026.

Our recommendation turns on one question

Are enquiries mostly calls and WhatsApp — or is there going to be a real sales pipeline for corporate and events?

Mostly calls and WhatsApp

Start with TeleCRM

Live in days, built around how the team already works, native WhatsApp Cloud API.

A real pipeline to build

Start with Zoho CRM

Grows into corporate and wedding sales, connects to the booking system, more configuration up front.

Either way

Connect a WhatsApp Business API provider so every conversation is logged against a person, and name **one owner** at the resort. A CRM nobody is accountable for becomes an empty database in a month.

Migration and training decide whether a CRM is used or abandoned. Budget for both.

If WhatsApp is the pipeline, choose the provider deliberately

Provider	Where it fits	What to check before signing
Wati	The widest adoption among Indian small and mid-sized businesses. Shared team inbox, broadcast templates, straightforward automation.	Per-seat cost as the front desk grows, and whether your plan exposes the API your CRM needs.
Interakt	Built for small teams that sell inside WhatsApp. Quick to set up, catalogue and order flows out of the box.	Depth of reporting, and whether it hands conversations to a CRM rather than trying to be one.
BiteSpeed	Campaign-led. Strong at broadcast, journeys and re-engaging people who dropped out of an enquiry.	That the journeys map to booking enquiries and not to an e-commerce cart.
LimeChat	The heaviest of the four, with AI-assisted agents. Made for high conversation volume.	Whether your enquiry volume justifies the cost, and how long implementation actually takes.

All four are Meta-approved providers, so the WhatsApp capability is broadly the same. What differs is the cost as you grow and how cleanly each one hands a conversation to the CRM. Shortlist two, demo them against your own enquiry flow, and confirm the hand-off before you sign.

Week one: stop the bleeding

Action	Owner	What it unlocks
Resolve to one Meta pixel, one dataset, standard events	Us, with site access	Reporting that can be trusted
Confirm whether Djubo can be embedded in the site	Client, with Djubo	The purchase event
Fix the day-out page so it loads	Client's web team	Spend already running to a broken page
Split day-out and rooms onto separate URLs	Client's web team	Product-level measurement
Open a separate Meta ad account for Guhantara	Client	Clean learning for the algorithm
Audit and retire Google conversion actions	Us, with account access	Bidding toward real outcomes
Choose the CRM and name its owner	Client	Everything downstream
Turn off the zero-lead placements	Us	₹67,188 of proven waste

None of these require new creative, a new agency retainer or a rebrand. They are the conditions under which the rest of the money starts working.

Four of the eight sit with the client, which is why we are showing them now rather than after signing.

SECTION FIVE

Where ₹45.65 lakh has been landing

Every rupee of media in this deck was spent driving people to one website. It is the least-examined asset in the whole operation and the reason two thirds of paid clicks never convert into a landing page view.

Day-out page fails to load

Too many requests, page times out — while ads run to it

One URL, two products

Day-out and rooms share a destination

Logo treatment

Cut out and pasted on; it does not read as the brand

No premium feel

Nothing signals India's only cave resort

Key details hidden

Room types, rates and inclusions are hard to find

No landing page testing

One page for every campaign, never varied

THE SINGLE MOST EXPENSIVE FAULT

Ads are running to a day-out page that does not load.

The page returns too many requests and times out. Meanwhile paid traffic is being bought and sent to it.

This alone would depress the landing-page-view rate across the whole account. It is a strong candidate for a large share of the **66% of clicks that never arrive**.

Day-out is the **higher-volume product** and the one the aggregators dominate. It is exactly the traffic Guhantara most needs to own directly.

Fix this before any other recommendation in this deck.

Two products, two buyers, one destination

The day-out buyer

A family or a group planning a Sunday. Wants price per head, timings, the activity list, how far it is, whether children are catered for. Decides in a day.

The stay buyer

A couple or a family booking a night underground. Wants room types, photographs of the interiors, rates, what is included, what the cave is actually like. Takes over a week.

What both get

The same URL. The same promotional homepage. Neither finds what they came for quickly, and the ad's promise is broken within two seconds of the click.

Beyond the conversion loss, this makes product-level measurement impossible. There is no way to say whether day-out or stay advertising works, because both land in the same place and neither fires a distinct event.

Four pages are needed, not one: day-out, stay, corporate offsite, weddings and events. Each with its own URL, its own event, its own ad set.

Indian travellers touch an average of 7 touchpoints before booking, and 44% take more than a week. Source: Think with Google APAC.

The logo is on the page, not part of it

What it looks like today

- Cut out and dropped onto the header
- No clear space, no consistent size
- Sits over imagery it was not made for
- Reads as a placeholder, not an identity
- Nothing about it says cave, or South India, or premium

What a brand mark has to do here

- Survive at 40px on a phone and at 4 metres on a banquet banner
- Work in gold on dark stone and in single colour on a bill
- Carry the one idea no competitor can copy: it is underground
- Anchor a system — lockups, clear space, secondary marks for Sambhojana, Rangamandapa, Agastya Kuteera

A property with 21,392 reviews and a genuinely unrepeatable asset is presenting itself with an identity that would not look out of place on any of the twenty resorts it competes with.

Observation from the live site. A full identity audit sits in the branding deck.

The website sells a discount. The property is worth more than that.

What the site does	What it signals to a buyer
Leads with 20–30% off codes	A crowd. Wait for a better code. Do not book at full price.
Struck-through prices in the booking engine itself	The real price is the lower one. Every guest learns this at checkout.
"Bangalore's Best Kept Secret" with emojis	A day-out venue, not a destination worth travelling for.
Little real imagery of the cave interiors	No proof of the one thing that cannot be copied.
No room types, capacities or rates on the page	The stay product barely exists; go to an aggregator instead.
No guest reviews despite 21,392 of them	Nothing to reassure a buyer who has seen 3.7 stars elsewhere.

Every weekday rate in the booking engine already carries a **20% discount by default** — the checkout teaches the discount habit before the guest has even chosen a room.

Replace the percentage with something the weekend crowd cannot get: a private amphitheatre slot, a spa credit, a guided tunnel trek. **Add value; protect the rate.**

Three sites worth putting beside yours

None of these three owns a cave. All three sell a stay better than guhantara.com sells one.

Aldovia

aldovia.in

Rooms, rates and capacities are on the page. Corporate and convention gets its own route through the site — the buyer Guhantara has no page for at all.

CGH Earth

cghearth.com

Prices the experience, never the discount. No codes on the homepage, photography that carries the property, every place allowed a story of its own.

Discovery Village

discoveryvillage.in

Day-out and stay are properly separated, with activity pages built the way people search. The direct competitor for weekday day-out demand.

The things a buyer needs are the hardest to find

These are the live rates. None of them appear on the website in a form a visitor can compare. They are three clicks away on a different domain.

Room	Room only	B&B	All meals
Primitive	₹4,620	₹5,040	₹7,560
Lithic	₹5,460	₹5,880	₹8,400
Glamp House	₹3,360	₹3,780	₹6,300

Per night, one adult, taxes included, weekday 20% offer applied.

Source: Djubo booking engine, read September 2026.

Not all rooms are caves

Glamp House is a wooden cabin above ground. The cave story covers some rooms, not all — and the site never says which.

"7–8 people looking"

Urgency labels sit on every room. If they are real, they help. If generated, they are a trust risk on a page whose reviews already need support.

The top rooms are invisible

Lithic Suite and Cave Suite — the rooms the cave story sells hardest — are not surfaced anywhere a buyer would look.

Four landing pages, one for each buyer

Day-out

Price per head, timings, activity list, drive time, what children get. Book or WhatsApp above the fold.

Highest volume · fix first

Stay

Room types with real interior photographs, rates, which rooms are underground and which are not, the descent as the hero.

Highest value per booking

Corporate offsite

700-seat amphitheatre, conference space, sample day plan, per-head range, downloadable proposal, short brief form into the CRM.

Fills weekdays

Weddings & events

Capacity, per-plate rates, the venues by name, real event photography, enquiry form into the CRM.

Highest ticket

Every page carries	Why
Its own URL and event	Product-level measurement becomes possible for the first time
Click-to-WhatsApp with the page pre-filled, beside Book Now	WhatsApp is how enquiries already arrive, and it can be tracked
Honest recent reviews, weekdays framed as the quiet time	A 3.7 rating costs conversions; hiding it costs more
An FAQ answering the real hesitations	Is it claustrophobic, is it safe, children, older guests, drive time
Campaign tags carried into the booking engine	Without this the loop still breaks at the domain boundary

Most Reels traffic arrives on a phone: compress the hero video, load it lazily, keep the first screen light.

The stay page, top to bottom

Above the fold

Hero video of the descent. One line.
Book Now and WhatsApp side by side.

The rooms — real interiors, rates, underground or above ground, marked clearly

What a night is like — the tunnel, the amphitheatre, the spa, the quiet

Reviews — recent, honest, weekdays framed as the quiet time

FAQ — claustrophobia, safety, children, older guests, drive time

Booking — embedded, on the page, never a redirect

Lead with the descent, not the pool

Going underground is the only thing on this property that photographs unlike anywhere else near Bangalore. It should be the first thing a visitor sees and the last thing they remember.

Show the price, drop the strike-through

Replace the percentage with something the weekend crowd cannot get. A discount signals a crowd; the buyer for a cave room is escaping one.

Answer the fear before the sell

"Is it claustrophobic" is the question that stops a first-time booking. Answering it plainly converts better than any offer.

Nothing has ever been tested. That is the opportunity.

Landing pages in use

1

For every campaign, every product, every audience

Tests run in 21 months

0

No variant, no split, no learning

Current landing rate

33.7%

Against a 60–70% floor

Test	What we vary	What it tells us
Hero	Descent video against the current promotional banner	Whether the cave story sells better than the discount
Offer	Percentage off against a value-add of equal cost	Whether we can protect the rate
Action	WhatsApp-first against Book Now-first	Which route this audience actually prefers
Proof	Reviews shown against reviews hidden	Whether honesty about the rating helps or hurts
Length	Short page against a full story page	How much convincing the stay product needs

One test at a time, each to a decision. Testing five things at once teaches nothing.

SECTION SIX

The creative is not bad. It is tired.

What we found

Creatives first launched in July are still running unrotated. Image and video quality is inconsistent across the set, and the messaging is built around the offer rather than around the person being shown it.

What it costs

Frequency climbs, click-through falls, cost per lead drifts up. It is a credible part of why cost per lead moved from ₹236 in January to ₹698 by September.

What is missing

Volume and test frequency are far below what this spend needs. No variant structure, no audience-specific messaging, no budget set aside for creative that might fail. Winners are never found because losers are never run.

Three fixes, in order: raise production quality on the cave itself, rewrite the messaging per audience against what each one actually responds to, and increase the number of creatives in market and the rate at which they are tested.

Creative-level export was not in scope for this audit; observations are from the account and the client's own review.

A creative cadence, not a creative opinion

Every month	What ships	Rule
Hero concepts	2 new ideas, properly produced	Built on the brand territory, not the offer
Iterations	4–6 variants of whatever is winning	Change one thing: hook, first frame, or caption
Guest and creator content	4–8 pieces, lightly produced	Cheapest way to find an unexpected winner
Retirement	Anything past 6 weeks or with rising frequency comes off	No creative runs indefinitely because it once worked
Test budget	A fixed slice, ring-fenced, allowed to fail	If nothing is allowed to lose, nothing new can win

Reels out-engage static posts by roughly **2.5×** in hospitality — 0.38% against 0.15%. The format split should follow that, not habit.

30–60 seconds reaches best, at **5.60%**. Past 90 seconds performance falls off sharply. Build the spec around that.

72% of Indians discover offbeat destinations through Reels, but **52%** need good reviews before booking. Reels fill the top; the rating decides the bottom.

THE ONE THING THAT IS CLEARLY WORKING

Corporate video, in the 25–44 bracket

25–34

₹1,127

561 leads · 42.3% of spend · the core

35–44

₹957

440 leads · the best rate in the account

18–24

₹1,857

123 leads · browses, shares, rarely books

Scale it. Corporate video should get its own campaign, its own landing page and its own budget line — targeted at 25–44, which is where offsite decisions are actually made.

Split 18–24 out. They are the audience that films and shares. Fund them as reach and UGC, judged on saves and shares — not as a lead source they will never be.

Source: Meta Ads Manager age breakdown, plus the client's own read on which creative drives corporate enquiries.

The rain dance is outselling the cave

What the reviews suggest

Across thousands of reviews, the rain dance and the pool are cited more often than the cave. Guests are booking a water park that happens to be underground.

Thrillophilia even lists the property as "underground location 10 m below ground, **with water park**" — the cave has become the adjective.

Why it matters commercially

A rain dance is a ₹1,499 day ticket sold to a crowd. A cave is an ₹11,300 room, a ₹1,500-a-plate wedding and a corporate booking of the whole property.

Why it happened

The advertising, the website and the booking engine all lead with activities and discounts. Guests are simply buying what they were sold.

What to verify

Booking mix by product — which the client can pull from the booking engine and we cannot. It confirms or kills this reading in an afternoon.

Every fault in this deck has the same shape: Guhantara is selling its amenities and giving away its architecture.

The **ads** lead with price and activity count

The **website** leads with a discount code

The **booking engine** discounts before a room is chosen

The **guests** come for the rain dance

Nobody in that chain is doing anything wrong. They are all following the same instruction, which was set years ago and has never been revisited.

The next slide is the decision that changes all four at once.

Three territories. One decision.

One

The Other Bangalore

The city's opposite, 35 km away. Cool, dark, quiet. The cave as relief, not novelty.

"Bangalore, but underground."

Safest. Argues against the day-out crowd that currently pays the bills.

Two

India's First

Own the history. A piece of Karnataka engineering nobody has repeated in over a decade.

"There is only one."

Best for corporates and weddings. Needs an origin story nobody has documented.

Three · recommended

Descend

The going-under is the experience. The threshold, the temperature drop, the tunnel, the amphitheatre.

"Go down."

Every reel has a structure built in. A guest filming their first descent is making the ad.

Our recommendation: Three, with Two as the proof. Descend gives a content engine that works from day one and needs nothing the property does not already have. "India's first" sits underneath it as the credential that makes the claim defensible.

This choice decides every slide of the branding and social decks that follow.

SECTION SEVEN

Weekdays are empty because the current audience is at work.

Guhantara already discounts weekdays by 25% and weekends by 15%. It has not solved the problem, and it was never going to.

Discounting a **crowd product** to the **same crowd** on a day that crowd is unavailable moves very little.

It also teaches every guest to **wait for the code**, which depresses the weekend rate too.

The answer is a **different buyer**, not a bigger discount. Five of them are free on a Tuesday.

Current offers per the client: weekdays 25% off, weekends 15% off.

Five buyers who are free on a Tuesday

Segment	Why they are free midweek	The offer to build	Where it runs
Corporate teams	Offsites are booked in working hours	Weekday offsite package, per head, with venue, activities and a facilitator bundled	LinkedIn, direct HR outreach, Google search
Remote and hybrid workers	Their week is flexible	Work-from-the-cave day pass: quiet space, connectivity, lunch, spa slot after	Instagram Reels, creator content
Couples on flexible leave	Weekday rooms are cheaper and quieter	A midweek stay framed as the quiet version, not the discounted one	Reels, saves, retargeting
Retirees and wellness seekers	Time is not the constraint	Weekday spa-and-stay built around Agastya Kuteera	Facebook, WhatsApp, local search
Event and wedding planners	Scouting and small functions happen midweek	Weekday site visit and a weekday function rate	Venue platforms, referral

Corporate is the biggest and the easiest. One person with a budget and a deadline, rather than a crowd to persuade. Guhantara already has the amphitheatre, the conference space, 18 rooms and one enclosed site.

And it is a repeat purchase. A good offsite books again next year — but only if the buyer is captured in a CRM. This is where the tracking work pays for itself.

Proposed segments to test, not proven demand.

Two rules that stop this becoming another discount

Rule one

Add value, do not cut price

A weekday offer that includes something the weekend crowd cannot get — a private amphitheatre slot, a guided tunnel trek, a facilitator, a spa credit — protects the rate and trains nobody to wait for a code.

Rule two

Measure weekday and weekend separately

From day one, report the two as separate lines. Otherwise a good weekend hides a bad Tuesday, and neither the client nor we can tell whether any of this worked.

Both rules depend on the CRM and the booking event. Without them, weekday occupancy is a number somebody reads off a spreadsheet once a month, not something a campaign can be steered by.

SECTION EIGHT · CASE STUDY

Supperclub

Membership sign-ups delivered

10,000

+

A premium dining and lifestyle membership across the UAE.

Supperclub opens high-end hotels and restaurants across the UAE, sold on seamless bookings, unlimited guests and substantial discounts.

Its buyers are tourists and frequent visitors, residents, and families hosting friends and relatives. We ran the acquisition that took its membership past ten thousand sign-ups.

It is a different category and a different country. The reason it matters here is what the machine underneath it looked like.

What transfers to Guhantara

What worked at Supperclub	What it becomes here
One clear paid action, measured as a real conversion	One booked action per audience: day-out ticket, room night, offsite enquiry
Segmented audiences with different reasons to join — visitors, residents, hosts	Segmented audiences with different reasons to book — offsite organiser, family, couple, wedding
Reach a person planning a trip before they arrive	Reach a Bangalore weekender before the weekend, a corporate planner a month before the offsite
Members return, so the sign-up is the start of value	A weekday pass turns a one-off booking into a repeat customer whose data you hold
Sign-ups measured per source, so spend followed what worked	Bookings measured per ad, so spend follows what fills rooms

The last two rows are the ones that matter. Supperclub's sign-ups were **traceable and owned**. Guhantara's bookings are currently neither.

The honest version: this was repeatable acquisition, not a lucky campaign. But it only worked because **the measurement existed first** — which is exactly what this deck is asking Guhantara to build.

Timeframe, spend and cost per sign-up to be added from our own records before presenting.

Six months, if the measurement holds

Metric	Month 1	Month 2	Month 3	Month 4	Month 5	Month 6
Meta spend	₹1,80,000	₹1,98,000	₹2,37,600	₹2,85,120	₹3,42,144	₹4,10,573
Google spend	₹90,000	₹99,000	₹1,08,900	₹1,19,790	₹1,31,769	₹1,44,946
Total spend	₹2,70,000	₹2,97,000	₹3,46,500	₹4,04,910	₹4,73,913	₹5,55,519
Total leads	560	689	909	1,144	1,522	1,959
Blended cost per lead	₹482	₹431	₹381	₹354	₹311	₹284
MQLs	156 · 27.9%	192 · 27.8%	284 · 31.3%	357 · 31.2%	548 · 36.0%	705 · 36.0%
SQLs	47 · 8.4%	57 · 8.3%	99 · 10.9%	125 · 10.9%	219 · 14.4%	282 · 14.4%
Bookings	23	29	50	69	120	155

Cost per lead falls 41% while bookings multiply 6.6 times. Spend roughly doubles over the six months, so the gain is in efficiency as well as volume: cost per booking goes from about ₹11,500 in month one to about ₹3,600 in month six.

Media plan supplied by Alttred Nexxus. Funnel rates are planning assumptions and get re-baselined after one clean month. MQL and SQL shown as a count and as a share of total leads.

Month one: where the ₹2,70,000 goes

META AND INSTAGRAM : 66% OF BUDGET

Category	Funnel	Audience	Spend	Leads	Cost per lead
Day outs	TOF	Interest and affinity	₹45,000	125	₹360
Day outs	MOF	Lookalikes	₹36,000	106	₹340
Stay	TOF	Interest and affinity	₹36,000	79	₹455
Stay	MOF	Lookalikes	₹36,000	88	₹410
Awareness	TOF	Interest, affinity and lookalikes	₹27,000	—	—
Total			₹1,80,000	400	₹450

GOOGLE : 34% OF BUDGET

Category	Campaign	Spend	Clicks	Enquiries	Cost per enquiry
Day outs	Search, brand terms	₹36,000	3,000	62	₹580
Stay	Demand Gen	₹36,000	2,250	64	₹560
Day outs	Search, non-brand	₹18,000	1,000	38	₹480
Total		₹90,000	6,429	161	₹560

Each product is bought separately, at both stages of the funnel, against its own audience — which is what makes the reporting in the next section possible.

Media plan supplied by Alttred Nexxus. Lead and enquiry counts are the plan’s own targets, not a guarantee. Awareness carries no lead target by design.

Ninety days

Days 1–30 · Fix

Make the numbers real

- One pixel, one dataset
- Day-out page loading
- Day-out and rooms on separate URLs
- Separate Meta ad account
- Google conversion actions rebuilt
- CRM chosen, owner named, live
- Zero-lead placements off
- Booking embedded or cross-domain tracking in place
- First landing page test running

Days 31–60 · Build

Point the money at the right people

- Four landing pages live
- Budget reweighted to women and Instagram
- Feed budget into Reels and Stories
- Corporate campaign and page launched
- Creative cadence begins

Days 61–90 · Prove

Report on bookings, not clicks

- First clean month of cost per booking
- Weekday and weekend reported separately
- MQL, SQL and booked rates baselined
- Weekday offers live and measured
- Brand territory agreed and applied
- Spend reduction target set on real data

We will not promise a spend reduction percentage on day one. We will commit to a target at day 60, once one month of clean data exists. Quoting a number now would be guessing, and this client has had enough numbers that were not real.

Days 1–30 depend on client-side actions listed earlier. Slippage there moves everything right.

What we would report, and what we would stop reporting

Report from month one

- Cost per booking, by product
- Cost per MQL and per SQL
- Qualified lead rate out of total leads
- Weekday against weekend occupancy
- Direct bookings against aggregator share
- Landing page view rate, target 60–70%
- Revenue per booking, before and after

Stop reporting

- Blended Google conversions
- Any conversion value from the current setup
- Impressions and reach as headline numbers
- Cost per lead without a quality measure behind it
- Anything that mixes the three resorts together
- Anything from before the fix, compared to after it

Expect the numbers to look worse before they look better. Conversions will fall sharply when the false ones are removed. Leads will look more expensive when they are counted honestly. That is the system starting to tell the truth, and it should be agreed now rather than explained later.

One month of clean data is the baseline everything after is measured against.

What we would take on

Measurement

Pixel consolidation, conversion rebuild, cross-domain tracking, Conversions API, CRM setup and integration, reporting.

Performance media

Meta and Google, restructured by product and audience, with a creative testing cadence and monthly reallocation.

Landing pages

Four pages, built and tested, with the booking flow kept inside the site.

Brand and identity

Territory, positioning line, tone of voice, visual language, logo system, the named spaces reclaimed.

Social and content

Content pillars, cadence, the UGC engine, creator programme, and a library built around the descent.

Not in scope

Peak-day capacity management and the guest experience behind the 3.7 rating. We will flag it every month, but it is an operations decision.

Two decks follow this audit: a **branding deck** and a **social media deck**, both built on whichever territory is chosen today.

Commercials to follow separately.

What we need from you

What	When	Why it blocks us
A decision on the brand territory	Today	Both follow-on decks are built on it
Admin access to Meta, Google, the site and Djubo	Week 1	Nothing in the fix list can start without it
Confirmation of which Meta pixel is canonical	Week 1	Reporting stays unreliable until resolved
Whether Djubo can be embedded on your plan	Week 1	Decides the booking event route
A named CRM owner at the resort	Week 1	A CRM without an owner becomes an empty database
Booking mix by product, last 12 months	Week 2	Confirms or kills the rain-dance reading
Enquiry sources and weekday occupancy	Week 2	Sets the baseline we will be judged against
Photography and video of the cave interiors, the amphitheatre and the spa	Week 2	The brand story cannot be told without it
Thirty minutes with whoever built the cave	Week 3	The origin story is undocumented and it is your most valuable asset

The last one matters more than it sounds. Who built it, when, why, what it was before, what "Guhantara" means, who chose the Sanskrit names — none of it exists in writing anywhere. It is the one story no competitor can ever tell.

Everything above is either a decision or an access request. None of it is a cost.

You already have the demand. What you do not have is a way to see it.

Twenty-one months, ₹45.65 lakh, 21,392 reviews and a cave nobody else in India has.
Build the measurement, tell the story that is actually yours, and every rupee after this one
starts working harder than the ones before it.
